**Significant Findings:** Enrollment trends have shown decreases in enrollment across all student characteristics. In the past African Americans have had lower completion rates but the number has drastically improved since 2015. Most other populations saw decreases in success percentages. This is most likely due to COVID.

**Conclusions and Next Steps:** Student outreach has been going on for the last year, via the Nursing Career placement coordinator and CTE career advisors. The majority of outreach has been with the high school population. Outreach has also occurred through the River Consortium Program.

**Improvements Based on Prior Years SLO Assessments**  
 The Nursing and Allied Health Division has seen a significant decrease in enrollment in all sections offered. We believe Covid-19 had a great impact. Also, students expressed dissatisfaction with zoom learning leading to deficient CNA pass rates. We also believe that now students are back to face-2-face learning pass rates will improve.  
 Since the last snapshot multiple courses have been updated through curriculum. The Registered Nursing Program is in its last phases of approval with the State of California BRN. We are hopeful to have RN students, August 2022. Also being developed is a Home Health Aide Program to continue to meet the needs of our community.
